

PRESS RELEASE: PlasmaShare Opens for Service in El Paso Region

New Plasma Donation Center In Production, Powered by Cutting-Edge Blood Establishment Computer Software

November 24, 2025

IT Synergistics, a leading software provider in the field of blood and plasma collection, congratulates PlasmaShare (plasmashare.com) on the successful opening of its premier plasma donation center. PlasmaShare joins a growing number of plasma-only organizations leveraging IT Synergistics' solutions to meet their operational and regulatory software needs. This state-of-the-art facility, located in El Paso, TX, is designed to enhance donor safety, improve operational efficiency, and streamline compliance – all supported by *bexWISE*, IT Synergistics' advanced Blood Establishment Computer Software (BECS) platform.

PlasmaShare offers a modern, donor-friendly environment with the capacity to serve hundreds of plasma donors each week. At the core of its operations is a BECS solution that integrates donor management, product tracking, compliance reporting, and quality assurance – ensuring full alignment with FDA and industry standards. The BECS platform supports real-time data monitoring, automated quality checks, and secure electronic documentation. This digital backbone enables faster, safer collections while minimizing the risk of errors, ultimately benefiting both donors and the patients who rely on life-saving plasma-derived therapies.

“We’re pleased to be providing PlasmaShare with *bexWISE* Affirm and Process, our blood collection and processing software solutions,” said Tim Bryant, President and CEO of IT Synergistics. “It’s an honor to support PlasmaShare’s contributions to the growing plasma community, as plasma donation plays a vital role in advancing patient care.”

Plasma donations are essential for producing treatments for immune deficiencies, bleeding disorders, and other life-threatening conditions. (Plasma-only donors can typically supply 600-800 milliliters of plasma in a single donation – in comparison, only 250-300 milliliters of plasma can be recovered from a pint of donated whole blood.) With the launch of this new facility in June 2025, PlasmaShare is poised to increase its contribution to the growing global demand for plasma products.

About IT Synergistics – IT Synergistics (ITSy) is a customer driven, 510(k) approved blood establishment computer system (BECS) and CRM vendor. Based upon an ongoing review of member blood centers' strategic plans and initiatives, ITSy's customers identify, prioritize, and recommend strategic additions to ITSy's overall portfolio. IT Synergistics is committed to meeting blood centers' software needs through a diverse product suite, including its latest offering, *bexWISE* Engage.
