PRESS RELEASE: Stanford Blood Center Goes Live with *bexWISE* Software

IT Synergistics Provides BECS Solution to SBC's Blood Donation and Processing Facilities in Northern California

February 2, 2026

IT Synergistics announces that Stanford Blood Center, headquartered in Palo Alto, California, has successfully completed the data conversion and operational qualification testing required for deploying FDA-cleared blood establishment computer software systems (BECS) into a production environment.

On January 20, 2026, Stanford Blood Center officially went live with IT Synergistics' BECS products, including *bexWISE* Affirm for blood collection and *bexWISE* Process for blood product processing and distribution.

"Stanford Blood Center's successful go-live reflects the strong collaboration between our teams and a shared commitment to operational excellence," said Tim Bryant, President and CEO of IT Synergistics. "We are proud to welcome SBC to the ITSy family and to support its mission with BECS solutions designed to scale with the needs of modern blood centers."

Stanford Blood Center processes, on average, more than 65,000 donor registrations annually, underscoring the importance of robust and dependable production systems.

"With a system like this one that touches every aspect of our operations, it is essential that we have a strong partner who can work side-by-side with our teams to ensure a successful launch. We are grateful for IT Synergistics' expertise and nimble response throughout our rollout of this essential software," said Harpreet Sandhu, CEO of Stanford Blood Center.

IT Synergistics' BECS solutions support blood centers across the full lifecycle of blood collection, processing, and distribution, helping organizations meet both operational and regulatory requirements.

For more information on *bexWISE* Affirm/Process (BECS) or other products and services, contact IT Synergistics.
